

Introduction to XML Schema Document (XSD) visualization

Part II: HTML documentation

Knowledge for Tomorrow

What is a schema?

- A schema* is itself an XML file (*.xsd), which defines the rules/syntax how a CPACS file (*.xml) may be structured:
 - how often and in which order may elements appear
 - what is the type of elements (string, double, complex type with sub-elements, etc.)
- summarized as *type* of an *element* 🧩

```

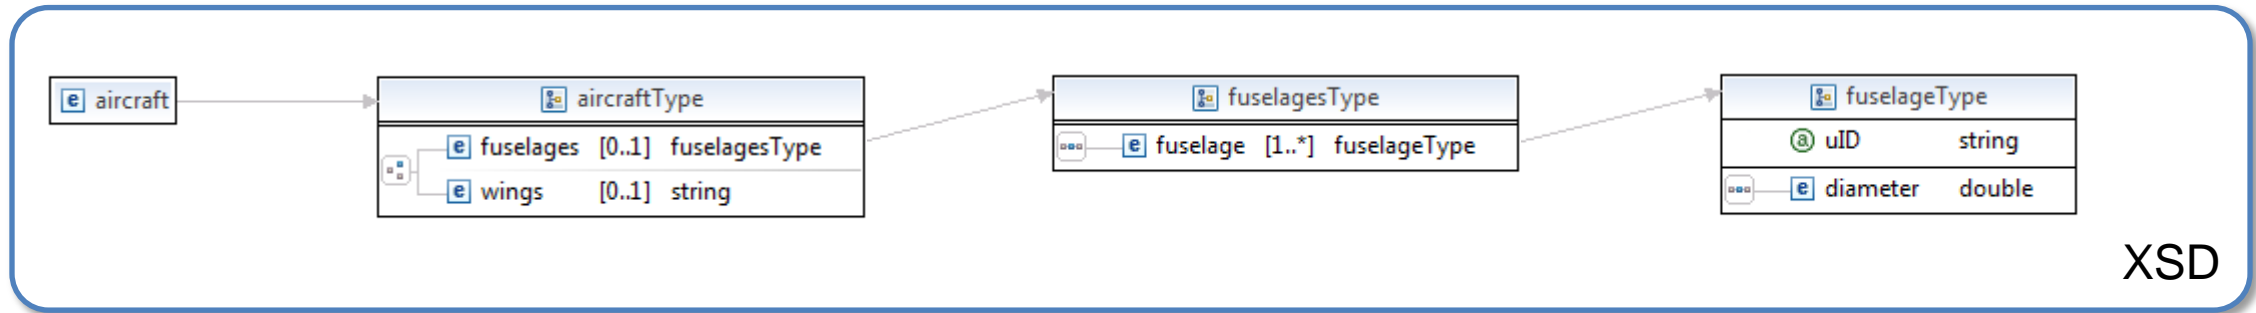

- <xsd:complexType name="aircraftType">
-   <xsd:annotation>
-     <xsd:appinfo>
-       <sd:schemaDoc>
-         <ddue:summary>
-           <ddue:para>aircraftType</ddue:para>
-         </ddue:summary>
-         <ddue:remarks>
-           <ddue:para>Aircraft type, containing all the aircraft models</ddue:para>
-         </ddue:remarks>
-       </sd:schemaDoc>
-     </xsd:appinfo>
-   </xsd:annotation>
-   <xsd:complexContent>
-     <xsd:extension base="complexType">
-       <xsd:sequence>
-         <xsd:element maxOccurs="unbounded" name="model" type="aircraftModelType" />
-       </xsd:sequence>
-     </xsd:extension>
-   </xsd:complexContent>
- </xsd:complexType>

```

*) in IT called *schema* and not *scheme*..

What are elements and types?

Simplified example similar to CPACS

- **Simple types:** double, string, integer ...
- **Complex types:** specify sub-elements and attributes of elements
→ used to build hierarchical structure

HTML documentation

Where does the content of the documentation come from?

- Content of the CPACS schema (*cpacs_schema.xsd*) is parsed by *Sandcastle Helpfile Builder* ([see GitHub](#) for more details)
- `<xsd:annotation>` node in the CPACS schema (*cpacs_schema.xsd*) contains all documentation

```

- <xsd:complexType name="aircraftType">
- <xsd:annotation>
- <xsd:appinfo>
- <sd:schemaDoc>
- <ddue:summary>
  <ddue:para>aircraftType</ddue:para>
</ddue:summary>
- <ddue:remarks>
  <ddue:para>Aircraft type, containing all the aircraft models</ddue:para>
</ddue:remarks>
</sd:schemaDoc>
</xsd:appinfo>
</xsd:annotation>
- <xsd:complexContent>
- <xsd:extension base="complexType">
- <xsd:sequence>
  <xsd:element maxOccurs="unbounded" name="model" type="aircraftModelType" />
</xsd:sequence>
</xsd:extension>
</xsd:complexContent>
</xsd:complexType>

```

HTML documentation

How to get the documentation?

- Option 1: executable (*CPACS_Documentation.chm*) at cpacs.de
 - <https://cpacs.de/pages/documentation.html>

HTML documentation

How to get the documentation?

- Option 2: online documentation at cpacs.de → <https://cpacs.de/pages/documentation.html>

The screenshot shows the CPACS Documentation website. The main content area is titled 'Documentation' and lists several CPACS versions with download links: CPACS 3.2 (download), CPACS 3.1 (download), CPACS 3.0 (download), CPACS 2.3.1 (download), and CPACS 2.3 (download). A red box highlights the 'CPACS 3.2 (download)' link. A red arrow points from this link to the 'cpacs Element' sidebar on the right. The sidebar contains the following information:

CPACS Element
CPACS root element
Namespace: Empty
Schema: Empty

Type
cpacsType

Children

Name	Occurrences	Description
All		
airlines	[0, 1]	airlinesType
airports	[0, 1]	airportsType
flights	[0, 1]	flightsType
header		headerType
missionDefinitions	[0, 1]	missionDefinitionsType
studies	[0, 1]	Design study parameters and results.
toolspecific	[0, 1]	toolspecificType
vehicles	[0, 1]	vehiclesType

Remarks
Version: V3.2
Date: 2020-02-18

HTML documentation

How to get the documentation?

- Option 3: latest GitHub build containing the compiled documentation (*CPACS Documentation.chm*)
 - e.g. <https://github.com/DLR-SL/CPACS/releases/tag/v3.2>

Latest release

CPACS 3.2

MarAlder released this on 18 Feb

CPACS 3.2

- Replaced tool-specific elements with `xsd:any` element and strict schema request for validation
- UIDs adapted to type `xsd:ID` and `xsd:IDREF`
- UIDs optional for `transformationType` and `pointTypes`
- Replaced `xsd:sequence` elements with `xsd:all` elements where possible
- `cpacsVersion` element set to optional
- `GuideCurves` are now optional for `nacelleCowlType`
- Documentation adaption

All issues for this release can be found online at:

- [CPACS 3.2 Milestone list](#)

Assets 3

- CPACS_3.2.zip 8.83 MB
- Source code (zip)
- Source code (tar.gz)

order of appearance

- Sequence is arbitrary (i.e. it does not matter whether *aircraft* is specified first and then *engines* or vice versa)

 All

- Sequence must correspond to the representation in the XSD diagram

Sequence

- Only one of the nodes may be specified (=choice element):

Choice

HTML documentation

Summary

- Navigate through the CPACS hierarchy by clicking on  for parent or child elements
- Check the occurrence (e.g., [0..1], [1..*], etc.)
- Check order of appearance: 
- Get list of attributes 
- Get further information about the type
